

SOUTH AUSTRALIA.

ANNUAL REPORT.

OF THE

REGISTRAR-GENERAL OF BIRTHS, DEATHS,
AND MARRIAGES.

1886.

ADELAIDE:

PRINTED BY E. SPILLER, GOVERNMENT PRINTER, NORTH-TERRACE.

1887.

REPORT.

General Register of Births, &c., Office,
Adelaide, March 25th, 1887.

Sir—I have the honor to present a report of Births, Deaths, and Marriages for the year 1886.

BIRTHS.

The registered births numbered 11,177. In 1884 and 1885 the births were 11,847 and 12,046 respectively.

The natural increase, or excess of births over deaths, is 6,943, which is less by 1,116 than that of 1885.

The birth-rate to every 1,000 of the population is 35·32, the lowest recorded in the ten years from 1877.

In the last annual report of the Registrar of England the birth-rate given is 33·4 per 1,000.

The birth and birth-rates per 1,000 of the population were, in the quarter ended:—

	March.		June.		September.		December.		Total.	
	Births	Rate	Births	Rate	Births	Rate	Births	Rate	Births	Rate
1886.....	2,796	35·32	2,952	37·44	2,868	36·36	2,561	32·36	11,177	35·32
1885.....	2,822	36·20	3,101	38·88	3,231	40·37	2,892	36·12	12,046	37·72
Decrease	26	·88	149	1·44	363	4·01	331	3·76	869	2·40

The decrease in the year in the number of births is thus 869, and in the birth-rate 2·40 compared with 1885.

In the present year the highest number of births was registered in the second quarter, the lowest in the fourth; in the first and third the numbers correspond with 1884. In 1885 the highest number was in the third quarter; the lowest in the fourth.

Compared with last year the decrease in the birth-rate per 1,000 population in the principal districts is in Adelaide, 42·7 in the place of 47·8; Norwood, 48·6 for 56·2; Hindmarsh, 45·5 for 51·1; Port Adelaide, 42·1 for 48·7; Daly, 41·7 for 46·4; Grey, 36·1 for 43·2; Kapunda, 31·1 for 38·8; Gilbert, 42·7 for 45·4; Burra, 40·3 for 42·6. The birth-rate in the district of Barossa increased from 33·7 to 34·0; Clare, from 34·3 to 35·2; Frome, from 43·4 to 45·5.

The births of males numbered 5,711; of females, 5,466; the proportion of males to females being 104·2.

The illegitimate births number 266, and are 26 under the number registered in 1885. The proportion of such births to 1,000 persons living is 84; to 1,000 unmarried women, at ages above 15 years, 7·3; to 100 total births registered in the year, 2·38. In England the proportion to 1,000 persons living is 1·6; to 1,000 unmarried women, between the ages of 15 and 45 years, 15·8; to 100 births registered in the year, 4·7. In the districts of Adelaide, Hindmarsh, Port Adelaide, and Norwood, which collectively include the city of Adelaide and suburbs, the illegitimate births number 183; the rate relatively to 1,000 persons living being 1·4; to 100 of the whole number of births, 5·05.

The deaths number 4,234. They exceed those of 1885 by 247, but are lower than those registered in each of the preceding years from 1882.

The death-rate per 1,000 of the population is 13·38; which, with the exception of 1885, is the lowest recorded in the ten years immediately preceding.

In England the death-rate for the four quarters of last year was—for the quarter ending March, 22·8; June, 18; September, 17·8; December, 18; the mean being 19·15. In Victoria the rate was 14·79; in New South Wales, 14·5; in Tasmania, 14·5.

The death-rate per 1,000 of the population in the principal registration districts is thus given:—

	1886.		1885.		1884.		1883.
Adelaide.....	23·9	23·1	29·7	27·8
Norwood	19·4	18·6	21·2	19·1
Hindmarsh ..	15·9	11·9	19·2	19·4
Port Adelaide...	16·1	14·1	16·7	15·3
Daly	13·4	13·8	13·5	13·8
Grey	13·4	16·1	12·5	10·3
Strathalbyn ...	14·3	18·8	20·5	15·1
Nairne	14·6	18·8	18·4	12·0
Barossa	9·9	10·7	13·9	13·0
Angaston	10·1	12·5	22·1	8·0
Kapunda	11·7	10·0	12·3	11·6
Gilbert	9·4	8·7	10·1	13·5
Burra	15·9	15·0	15·1	12·1
Clare	9·6	9·2	11·4	9·9
Frome.....	14·4	11·0	15·3	13·4

It must be understood that the above table is based on the census returns of 1881, and that the figures may not strictly represent the ratios according to present population.

Compared with 1885, a year remarkable for the lowest death-rate for many years, the mortality of Adelaide shows no great increase, the present year being 23·9; the former year 23·1; so with regard to the district of Norwood, the present and last year being 19·4 and 18·6 respectively. In Hindmarsh the death-rate is higher by 4; in Port Adelaide by 2. In Daly, Grey, Strathalbyn, Nairne, Barossa, Angaston, and Gilbert the death-rate is under that of last year. If a comparison be made with the death-rates in the districts prevalent in the years 1884 and 1883 the healthfulness of the present year is very apparent. In Adelaide, for instance, the death-rate of 1884 exceeds that of the present year by 5·8; that of 1883 by 3·9.

The following return shows the estimated population, and the births and deaths registered in *Adelaide and suburbs*, i.e., Adelaide, and places within a radius of ten miles (including hospitals, &c.), during the ten years ended with 1886. The principle adopted in estimating population is that followed by the Registrar-General of England. The peculiar circumstances of the colony during the last two or three years have caused fluctuations in different districts and towns which may lead to some error in the estimates, which cannot be adjusted until a new census has been taken:—

Year.	Estimated Population.	Births.		Deaths.	
		Total Number.	No. per 1,000 of the Population.	Total Number.	No per 1,000 of the Population.
1877	76,499	3,115	40·72	1,508	19·71
1878	83,058	3,473	41·81	1,771	21·32
1879	89,607	3,945	44·03	1,818	20·29
1880	96,356	4,003	41·54	2,014	20·90
1881	103,864	4,424	42·59	2,145	20·65
1882	110,422	4,657	42·17	2,337	21·16
1883	116,879	5,014	42·89	2,449	20·95
1884	123,538	5,291	42·82	2,621	21·21
1885	127,013	4,270	33·61	1,822	14·34
1886	128,377	3,626	28·24	1,837	14·31
Mean of 10 years	105,561	4,181	40·04	2,032	19·48

In the above table appears a notable decrease in the number and rate of both births and deaths. The number of births, 3,626, which occurred in 1886 in Adelaide and suburbs, is less than any registered since the year 1879; and the number of deaths, 1,837, is but fifteen above the lowest in the same period. The rate per 1,000 of the population, both of births, 28·24, and of deaths, 14·31, is, without exception, the lowest. Taking the population of the last census, 1881, the birth-rate would be 28·99, the death-rate 14·68.

The estimated population of the city of Adelaide is 45,333. The total number of deaths was 856, being at the rate of 19 per 1,000. Excluding deaths of persons in public institutions, not residents in the city, the number was 721, being 16 per 1,000.

Of the whole number of deaths in the province, 4,234, the males numbered 2,349, the females, 1,885; an excess of the former over the latter of 464. To 100 deaths of females the deaths of males were 124·6. The deaths of males to 1,000 of the male population were 14·4; those of females to the female population, 12·4.

The proportion of deaths at different ages to 1,000 deaths at all ages is:—

	Under 1 year.	5	20	40	60	80	80 and upwards.
1886	333	108	73	163	147	146	30
1885	343	114	83	153	133	144	30
1884	332	154	87	156	122	125	24
1883	367	137	71	148	132	127	18
1882	375	121	76	157	133	117	21
Average....	350	127	78	155	133	132	25

In the above record the proportion of infant mortality to the number of deaths at all ages appears very favorably, being but one above the lowest in the five years indicated, and 42 below the highest, that of 1882, when the proportion was 375. In the age-period "1 year and under 5 years," the number, 108, is the lowest noted. In the year 1884 the lowest proportion, 332, of infantile deaths is given; but the deaths at the succeeding period, "under five years," were at the highest. The ages above 20 years are those in which the proportion of deaths has increased.

In the following table are given death-rates at successive age-periods, per 1,000 persons living at each period according to census population, 1881 :—

		South Australia.		England.	
All ages		13.55	19.6
Under 5 years		40.2	63.4
10 years		3.72	3.3
15 "		1.84	4.6
20 "		3.53	5.9
25 "		4.07	8.0
35 "		7.06	11.7
45 "		9.71	17.4
55 "		13.30	30.0
65 "		27.01	61.0
75 "		57.20	134.4
85 " and upwards ..		146.47	268.8

In each of the stated periods the death-rate is under that of England, as published in the last annual report. Compared with a like return furnished in 1884 the rates now prevailing are favorable throughout. The death-rate of children under five years is less by 9 per 1,000 of persons living at that age. The rate at 65 years of age is 2.2 higher; at 75 years 1.3. Compared with 1885, the deaths under 5 are 1.3 in excess.

The deaths of infants under one year of age, 1,409, relatively to the births, 11,177, are 126.0 per 1,000. In the years 1882 to 1883, 1884, and 1885, the proportion was 152, 146, 134, and 113 respectively. In England the last estimate (1884) is "147 to 1,000 live-born children." In the "Victorian Year-book for 1885-6," page 271, the infantile mortality in Australasian colonies, that of 1884, is thus given: The deaths of infants, per 1,000 births, were in Victoria, 114; New South Wales, 126; Queensland, 147; South Australia, 134; Tasmania, 99; New Zealand, 79.

In reference to infant mortality, facts have come within my knowledge which tend to show that the rate calculated from the records of the office is in excess of the correct figures. Under the compulsory vaccination Act it becomes necessary to mark the names of all children registered in the colony when certificates of their having been successfully vaccinated are received. It has been found that a large number of certificates of vaccination come to hand of children whose births have not been registered. These are much more numerous than can be accounted for by immigration of children born in other countries, and there is reason to believe that the number of children born in the colony and not registered is sufficient to cause a marked increase in the apparent ratio of deaths during infancy. I am informed by gentlemen of longer experience in the registration department that, amongst a certain portion of the community, the registration of births has been greatly neglected, the baptismal certificate being looked on by parents as equivalent.

In the quarterly divisions of the year the death-rate per 1,000 population is according to the following :—

Quarter ending	1881	1882	1883	1884	1885	1886
March	17.12	18.59	15.48	18.17	12.56	17.16
June	15.24	15.38	14.67	16.39	12.40	13.40
September ..	11.48	11.40	12.00	13.40	10.83	10.24
December ..	12.80	14.08	19.02	13.04	13.04	12.44

The highest death-rate appears in the first quarter; this is succeeded in the order of fatality by the second, fourth, and third. This order is very seldom deviated from; the same order of procession prevails in England, though the seasons are reversed.

The death-rate per 1,000 of the population in each month is—

		1886	1885	1884	1883
January	17.3	11.8	18.96
February	12.2	11.7	16.44
March	13.3	13.9	18.96
April	11.9	11.5	19.44
May	11.8	12.6	16.44
June	9.8	13.0	13.20
July	9.8	12.6	13.68
August	7.7	10.3	14.61
September ..	8.1	9.6	11.88
October	8.0	10.0	11.40
November ..	9.7	14.2	12.12
December ..	13.3	17.5	15.48

The monthly death-rate does not compare unfavorably with that of 1885, which was the lowest for several previous years. The highest death-rate occurred in January (17.3), and is the continuance of the high rate of mortality (17.5) which originated in the December of the year before. The rate in February is 12.2, in the place of 11.7; and in April, 11.9 for 11.5. In March the difference is slightly in favor of the present year, and throughout the other months the decrease in the rate is most notable. The lowest rate was in the month of October (8.0); the lowest, in 1885, was in September (9.6). A comparison between the eight months from May to December in the years 1885 and 1886 is greatly in favor of the latter year, which has an average rate of 9.8 in the place of 11.2 in 1885.

In the monthly returns of temperature, supplied from the Adelaide Observatory, that of January appears with the highest rate. In this month the highest, mean, and lowest are 112.4, 76.0, 50.8 respectively. In these three notations this month exceeds any of the others. The death-rate, 17.3 per 1,000, is the highest recorded. The number of deaths at all ages is 555; and at under one year, 243. February, the next in succession for high temperature, has the highest, 105.7; mean, 69.1; lowest, 49.1. The deaths from all ages decreased to 388, and those under one year to 164. The lowest monthly temperature is in June, the highest 68.3; mean, 52.8; lowest, 35.6. The deaths at all ages numbered 312; under one year, 81. Between these extremes appear the months of September and October. In the former month the total number of deaths was 258; of infants under one year, 59; the thermometrical reading at the highest, 82.5; mean, 61.6; lowest, 40.1. In the latter month, October, the deaths were 255; at under one year, 76; the thermometer being, highest, 79.3; mean, 58.4; lowest, 39.5.

In the following table are set forth the deaths, date of their occurrence, and daily temperature in the city of Adelaide and suburbs during the months just referred to :—

January.					December.					September.				
Date.	Temperature.		Deaths.		Date.	Temperature.		Deaths.		Date.	Temperature.		Deaths.

31st	50.8	70.5	2	5	31st	54.2	73.6	2	3	31st	—	—	—	—

In January the highest temperature, 112·4, with the minimum, 82, was on the 4th. This is the highest reading of the thermometer throughout the year. The deaths on that day were 25—five under one year, twenty at above. On the following day, the 5th, the deaths were 36, the greatest number that occurred on one day throughout the year. Of this number 12 were infants, 24 at one year and above. The thermometer on that day at the maximum was 99·7, and the minimum 89·2. On the 4th, the difference between the maximum and the minimum was 19·6; on the 5th, 10·5. In this month the lowest number of deaths was on the 26th; two deaths, both above one year, having taken place on that day. The maximum heat was 84·4; the minimum, 64·4.

In December the greatest number of deaths, 16, took place on the 13th. The maximum heat was 95·9; the minimum, 76·1; the difference, 23·7. On the 14th, with the highest temperature six degrees above that of the previous day, the actual deaths were but 6. The minimum temperature was 34·7 below the maximum.

It is unnecessary to do more than to refer to the mortality and temperature returns of September, which require no comment.

CAUSES OF DEATH.

The following table shows the causes of death under the respective classes of—

	Total in 1886.	Total in 1885.
Zymotic diseases (exclusive of diarrhoeal diseases)	365	386
Diarrhoeal diseases	328	334
Parasites	30	15
Dietic diseases	57	37
Constitutional diseases	603	576
Developmental diseases	407	353
Local diseases	1,813	1,707
Violence	272	212
Ill-defined and not specified causes ..	359	367
Total	4,234	3,987

Of the diseases above enumerated, 3 deaths occurred from measles, against 6 in the preceding year, and 139 in 1884; 93 occurred from whooping cough, being an increase on 1885 of 3; 13 occurred from scarlatina, being an increase of 9; 89 from diphtheria, being a diminution of 13; and 93 from enteric fever, being a diminution of 39. Of the deaths from whooping cough, 34 occurred in the corporate towns with an estimated population of 121,625, being at the rate of ·28 per 1,000, against ·3 in country places. Diphtheria caused 31 deaths in corporate towns, being ·25 per 1,000, against ·3 in country places. Enteric fever caused 52 deaths in corporate towns, being ·43 per 1,000, against ·21 in country places. Of the 328 deaths from diarrhoeal disease, 228 were of infants under one year old. In the city of Adelaide the deaths under one year from diarrhoeal disease were 30, being in the ratio to the births of 24 per 1,000, against 20 per 1,000 for other parts of the colony.

Enteric Fever.—The number of deaths from this cause was 93, against 132 in 1885. This is a remarkable diminution on the four preceding years, but is higher than in 1880 and 1881.

The ages at which death occurred was—

From 1 to 5 years old	6
“ 5 to 20 “	36
“ 20 to 40 “	43
“ 40 to 60 “	8
Total	93

The number of deaths in each month was—

January	7
February	13
March	17
April	10

Number of deaths in each month—*continued*—

December	17
Total	93

The proportion of deaths from this cause to every 1,000 of the population was ·3, and to every 1,000 deaths from all causes 22. The number of deaths in corporate towns was 52, being at the rate of ·41 per 1,000 inhabitants, and 25 per 1,000 of all deaths from other causes. In Adelaide the ratio was ·46 per 1,000 inhabitants and 23 per 1,000 of all deaths. In the city of Adelaide and suburbs (*i.e.*, within a radius of ten miles) the rate per 1,000 of persons living was ·36, and of all deaths 25.

There is still much room for improvement, but it is believed that continued and determined efforts to prevent the spread of this easily preventable disease will meet with success. The colony compares unfavorably with England, where the number of deaths from this cause was ·2 per 1,000 inhabitants, and 10·6 per 1,000 of all deaths, but the comparison with the other colonies is favorable. The deaths in Melbourne and suburbs in 1886, from enteric fever, were ·79 per 1,000 inhabitants, and 38·7 per 1,000 in all deaths. In Tasmania the deaths were ·39 per 1,000 inhabitants, and 23·7 per 1,000 of the total deaths.

For useful reference the following table is appended:—

South Australia.	1880.	1881.	1882.	1883.	1884.	1885.	1886.
Rate per 1,000 inhabitants of deaths from enteric fever..	·24	·3	·49	·44	·44	·41	·3
Rate per 1,000 of all deaths in province	16	21	37	30	28	33	22

Parasites.—Of deaths caused by parasites, 18 were the result of hydatids, as against 5 in 1885. Of these, 10 occurred in the Adelaide district, 3 in Port Adelaide district, and 1 each in Norwood, Mount Barker, Highercombe, Barossa, and Clare districts. It is ascertained that of the 10 cases in the Adelaide district, 3 only had their usual residence in that locality.

Dietic diseases.—Of the 57 deaths under this head, 44 are recorded as having occurred in infants from starvation—want of breast-milk; the other 13 are set down to intemperance. The deaths registered under this heading must not be considered as the total of fatal cases arising from improper diet. There is no doubt that a large proportion of the deaths from diarrhoeal diseases are caused by mistakes in diet. This is particularly true respecting young infants, hundreds of whom are sacrificed to ignorance or neglect of ordinary dietetic rules. Many of the diseases under other headings also owe their origin to the same causes.

Constitutional Diseases.—Of these, cancer has been somewhat more fatal than in 1885. Twelve more women than men have died from this cause during the year. In both sexes the disease has shown itself chiefly in the latter stage of middle life, and in the old. Two cases only occurred in persons under thirty years of age.

Phthisis.—The number of deaths from this cause during the year has been 339, being 32 more than in 1885. The rate per 1,000 inhabitants was 1·07, and of deaths from all causes, 8. In England, the rate per 1,000 population was about 2·29, and in the Australian colonies the ratio is nearly the same as in South Australia. It is known that many phthisical patients are sent to Australia from Europe, and that the deaths of some of these swell the Australian records. How far this factor influences the returns is not determined, but during the last eight months the registrars in South Australia have been instructed, whenever possible, to obtain, on registering a death from phthisis, information as to the length of time the deceased had resided in the colony. One hundred and seventy-one persons have died from phthisis since these instructions were issued. It is found that 69 of these were born in the colony—two had been resident one year; 6, two years; 4, three years; 2, four years; 4, five years; 13 between five and ten years; 8, between ten and twenty years; 10, between twenty and thirty years; 24, between

thirty and forty years; 1, forty-eight years. In 28 cases the length of residence could not be ascertained. Of those born in the colony, 9 were below twenty-one years old, and 38 between twenty and thirty years old. These observations require to be continued, but at present the immigration of phthisical patients is not shown to largely influence the number of deaths from this disease.

Developmental Diseases.—The deaths from these were 407, against 353 in 1885. The deaths from old age were 282, against 234 in the preceding year.

Local Diseases.—Under this class 1,813 deaths have been registered, against 1,707 in 1885. Of these 537 occurred in children under one year old. One hundred and forty-three of these children died from convulsions, 169 from diseases of the respiratory organs, and 76 from dentition.

Of diseases of the nervous system it should be noted that 35 died from insanity. This is, within one, double the number of deaths from this cause during any preceding year of the last decennial period, and 23 more than the average for the same period.

Of the diseases of the respiratory organs, the fatality from croup has been greatly diminished. Twenty-eight deaths resulted from this cause, against 86 in 1885, and against 74, the average of the last ten years.

Violence.—The deaths from violence were 272—216 males and 56 females. Twenty-five men and 6 women committed suicide. There were 240 deaths from accident, and 1 murder.

Ill-defined Causes.—Of the 359 deaths registered under this head 315 are entered as being caused by debility, atrophy, or inanition. Two hundred and eighty-seven of these were of children under one year old. A large portion of these deaths, doubtless, were caused by improper feeding. Another portion is due to inherited disease.

MARRIAGES.

The marriages number 1,976. This is the lowest number in the last ten years, those of 1877 being 2,002. They are less than those of 1885 by 471. No such decrease has happened before, the nearest approach being 222 in the year 1882.

The marriage-rate, or persons married to 1,000 population, is 12.48. The lowest of any preceding year, that of 1885, being 15.32. The marriage-rate in England in the last annual report received, was 15.1.

The marriage-rate and exports in South Australia for the years from 1878 to 1886, are—

Year.	Marriage-rate.			Exports per head		
				of Population.		
				£	s.	d.
1878	18.94		22	1	1
1879	17.54		18	13	4
1880	17.32		21	1	8
1881	16.00		15	5	6
1882	17.10		18	2	2
1883	16.66		16	0	5
1884	16.26		21	1	6
1885	15.32		16	19	1
1886	12.48		14	3	9

The marriage-rate, 12.48 to 1,000 persons married, is the lowest in the nine years, as given above; and the exports per head of population, £14 3s. 9d., are the lowest in the same period.

The marriage-rate of 1885, 15.32, was lower than that of any preceding year, but is in excess of the present year by 2.84 per 1,000.

The exports of that year are also £2 15s. 4d. in excess.

The marriages in the quarters of the year were— in the first quarter, 548, in the place of 614 in the preceding year; 517 for 660 in the second quarter; 440 for 564 in the third quarter; and 471 for 609 in the fourth.

Persons married under 20 years numbered 373, a decrease of 93 on 1885; under 25 years the decrease in the number of men was 186, of women 266. In the next division of ages, 30 years, the number of men married was less by 198, of women by 70. A lessening in the numbers occurs throughout all the ages, with the exception, that the number of men married at 50 years was in the present year 36, in the year before 33; also in the marriages of widowers and spinsters there is an increase of 7.

The following is the proportion of persons married at the undermentioned ages, to 1,000 persons married—

15 and under 20	Male	5.5	Female..	88.8
20 “ 25	“	181.7	“ ..	259.1
25 “ 30	“	185.9	“ ..	93.3
30 “ 35	“	62.2	“ ..	24.7
35 “ 40	“	26.3	“ ..	14.1
40 “ 45	“	13.1	“ ..	6.6
45 and above	“	27.1	“ ..	12.4

Of the number of men married at the ages 20 and under 25 the proportion to 1,000 of the whole number is less by 3.4; of women by 4.1; in the next division of ages, 25 and 30, the proportion of men is decreased by 4.7; that of women increased by 3.4; under each of the remaining ages, both of men and women, the proportion is increased.

The marriage-rate, or persons married, to 1,000 persons living at the undermentioned ages, is—

15 and under 20	Male...	1.4	Female..	23.4
20 “ 25	“	42.4	“ ..	73.9
25 “ 30	“	48.8	“ ..	36.1
30 “ 35	“	22.4	“ ..	12.9
35 “ 40	“	10.8	“ ..	8.3
40 “ 45	“	7.2	“ ..	3.9

Compared with last year, the marriage rate, in reference to population, shows a large decrease under every age. In the ages 20 and under 25, the marriage of males was last year 53.5 in place of 42.4 in this; of females, 93.3 for 73.9. In the next division of ages under 30, the marriage-rate of last year was, of males, 62.0 for 48.8 in 1886; of females, 43.0 for 36.1.

The number of signatures by marks was 127, 60 of which were of males, 67 of females; the rate per cent. of signatures to the marriage register being, of males, 3.0; of females, 3.1. In 1883, the proportion of signatures by marks to every hundred signatures in the register of marriages was, of males, 4.0; of females, 4.3.

I have, &c.,

H. T. WHITTELL,

Registrar-General of Births, Deaths, and Marriages.

No. 1.—Return showing the Number of Births and Deaths registered in each Quarter of the Year 1886, and the Excess of Births over Deaths.
